

Andrianna Wardill

240 Stedman St. | Ottawa, ON K1T0B9 | (613) 410-4013 | andrianna@wardill.ca | GitHub: [andri3366](#) | LinkedIn: [Andrianna Wardill](#)

SKILLS

Programming & Data Processing:	Python (Pandas, NumPy, API integration, data pipelines), SQL (CTEs, window functions, views), R, Java
Data Science & Machine Learning:	Exploratory Data Analysis (EDA), feature analysis, predictive modeling, model evaluation (MSE, MAE, R^2 , precision, recall)
Data Engineering:	Extract-Transform-Load (ETL) pipelines, large-scale data ingestion, BCP bulk loading, data cleaning and validation automation
Databases & Tools:	PostgreSQL, SQL Server, DBeaver, pgAdmin 4, Anaconda, Jupyter Notebook, Git
BI & Visualization Tools:	MS Excel (Pivot Table, VLOOKUP, Power Query), Tableau, Power BI
Soft Skills:	Analytical thinking, organization, time management, attention to detail, communication, problem-solving, teamwork
Languages:	English (fluent), French (intermediate)

PROJECTS

Flight Price Prediction Web Application – Team Project

March 2026

Role: Machine Learning & Data Pipeline Development

Python (Requests, Pandas, scikit-learn), REST APIs, Machine Learning, Data Processing

- Built pipelines to ingest and preprocess real-time flight pricing data from SerpAPI
- Productionized machine learning models by converting notebook-based workflows into reusable Python scripts and serialized .pkl files
- Implemented model evaluation (MAE, R^2) within the main pipeline and supported model updates through separate retraining scripts

Large-Scale Housing Data Pipeline (National Address Registry)

April 2026

Role: Data Engineering & Data Modeling

Python (Pyodbc, glob), SQL Server, BCP, Data Engineering

- Consolidated 28 separate housing datasets into a unified dataset using Python glob for parallel file processing
- Implemented data validation checks to ensure schema consistency, including header alignment and record count verification across all files
- Processed and loaded 17M+ rows into SQL Server using high-performance bulk ingestion (BCP)
- Designed a normalized relational schema with master and lookup tables to efficiently manage categorical data and support scalable querying and analysis

Synthetic Healthcare Data Generation (ICD-10 Aligned) – Team Project

April 2026

Role: Data Simulation & Feature Engineering

Python (Faker, RapidFuzz), SQL Server, Power BI

- Generated synthetic hospital datasets using the Python Faker library with a healthcare-specific provider extension, aligned with the WHO ICD-10 standards for realistic diagnostic coding
- Applied fuzzy matching using the Python RapidFuzz library to map patient diagnosis to suitable treatment plans and doctor departments based on specialty similarity

- Implemented data validation logic to ensure consistency, accurate coding patterns, and realistic data distributions
- Exported structured datasets to CSV and integrated them into SQL Server using bulk insert operations

Image Metadata Extraction Pipeline

April 2026

Role: Data Processing & Data Modeling

Python (Pyodbc, PIL, JSON), SQL Server, Data Processing

- Built an end-to-end pipeline to extract and process image metadata (EXIF, XMP, IPTC) from raw image files into SQL Server
- Developed recursive parsing and flattening functions to transform nested metadata into structured key-value pairs
- Designed a normalized relational schema using master, metadata, and lookup tables for efficient querying

Ottawa Fatal Vs. Non-Fatal Predictions – Team Project

April 2026

Role: Machine Learning & Model Evaluation

Jupyter Notebook (scikit-learn, imbalanced-learn), Data Modeling, Data Validation

- Built classification models on a highly imbalanced dataset (~0.2% positive class), applying SMOTE, SMOTE-ENN, and ADASYN to improve minority class detection
- Evaluated models (Logistic Regression, Random Forest, Gradient Boosting, XGBoost, SVM) using PR-AUC, Matthews Correlation Coefficient (MCC), and F1-score
- Conducted extensive experiments across resampling strategies and data splits to identify optimal model performance and applied hyperparameter tuning

EXPERIENCE

Hard Rock Casino and Hotel – Ottawa, Ontario

July 2025 – Present

Food Runner – Council Oak

- Deliver high-quality service in a fine dining environment and assist servers with food delivery

The Grand Pizzeria and Bar – Ottawa, Ontario

July 2021 – October 2024

Hostess / Expeditor

- **Hostess:** Greeted guests and coordinated seating rotations to balance server workload
- **Expeditor:** Managed food order flow and assisted servers with food delivery

EDUCATION

Algonquin College of Applied Arts and Technology

January 2026 – August 2026

Graduate Certificate

- [Business Intelligence Systems Infrastructure](#)

Algonquin College of Applied Arts and Technology

September 2022 – April 2025

Advanced Diploma

- [Computer Engineering Technology – Computing Science](#)
